## **DETAILED ACTION**

### ***Response to Amendment***

#### ***Election/Restrictions***

1. Applicant elected 9/29/2005 the species of “the first and second therapeutic agents are the same” (subspecies d) as well as species a). Therefore, claims 5, 9, 13-18 and new claim 19 (drawn to applying different therapeutic agents) are withdrawn from consideration.

#### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. The rejection of Claims 1-4 and 6-12 under 35 U.S.C. 112, first paragraph, is withdrawn because of the amendment filed 2/13/2006.

Art Unit: 1762

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-4, 6-8 and 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 2002/0133183.

'183 teaches applying a drug such as heparin to the inner surface of a stent, where the heparin would come in contact with the blood, and another drug such as rapamycin to the outer surface where it comes in contact with the tissue. The two drugs are applied in a variety of polymeric coatings, that do not have to be the same. The two drugs come in contact with different anatomical areas, each of which may have different disease characteristics. The two drugs inherently have different release kinetics.

Alternatively, heparin may be immobilized on the inner surface and rapamycin and heparin on the outer surface of a stent [0121]. Although '183 does not directly state that the amount of heparin in the outer surface is coordinated with the amount applied to the inner surface, it would have been obvious to one of ordinary skill in the art to have coordinated the amount of drugs applied to the two surface.

In another embodiment, different forms of heparin may be immobilized on the coating, thus creating a plurality of reservoirs [0122].

See [0118]-[0123].

***Response to Arguments***

The applicant has argued that Lentz does not teach reducing the error rate in drug application. The examiner disagrees. Lentz ('183) teaches the importance of monitoring drug release profiles [0092], starting with formulating the stent coatings. Thus, Lentz teaches that the drug release profile, which is important to monitor, is dependent on the amount of drug on the stent in the first place.

***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
